S4 — Income sources and freelance invoices wireframe

Document	`Docs/wireframes/S4-income-invoices.md`
Issue	EPIC-011 / T4 · Secondary wireframes for M3 screens (#124)
Screens	SCR-12 Income, SCR-30 Income source edit, SCR-31 Freelance projects, SCR-32 Project detail, SCR-33 Project edit, DLG-01 Confirm pending item, DLG-02 Income estimate (`Docs/ux/screens.md`)
Fidelity	Low: boxes and labels only. Visual polish is M4.
Failure causes from	`Docs/Scenario analysis.md` (rows `A-xx`)
Index	`Docs/wireframes/failure-causes.md`

Job of the screens. Show what has actually arrived against what is expected, and never let an unpaid invoice go quiet. Expected salary and milestones are kept apart from received income (A-12). A milestone becomes *overdue* by itself once its due date passes (A-13, BR-15).

Legend: `[n]` is a callout that matches the annotation table below. Figures are the scenario figures and appear only in documentation (CON-15). Dates are DD/MM/YYYY (NFR-20). Amounts are drawn as whole rupees to keep the frames readable; the app formats them as `LKR 1,000.50` (NFR-20, BR-02), see §12. Today is 07/10/2026. Status is a neutral outlined chip, never a red alarm (NFR-14).

1. Wireframe — SCR-12 Income (populated)

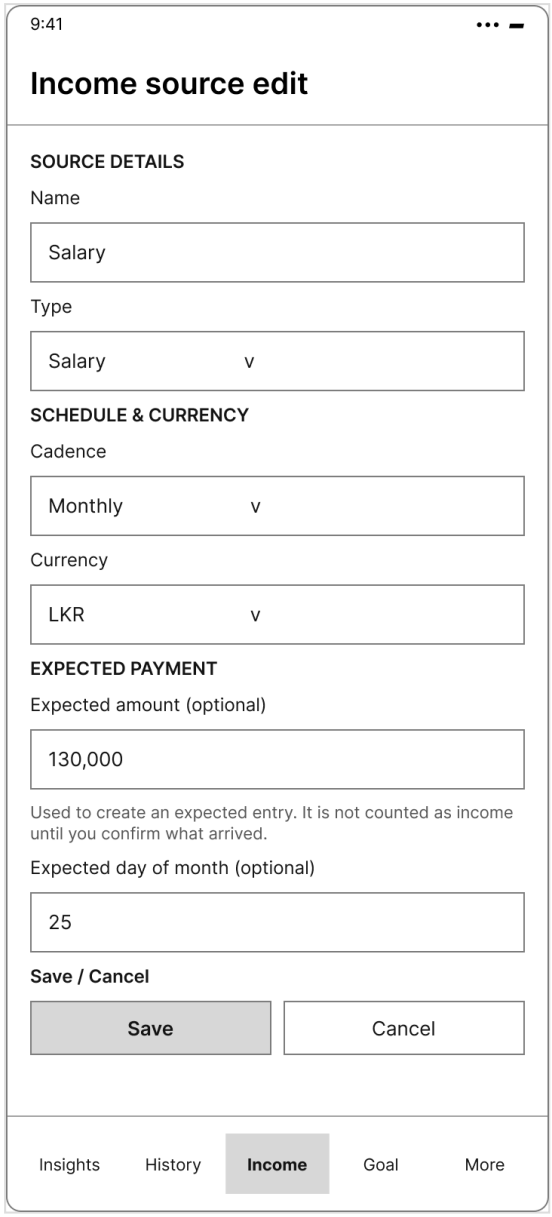

Figma wireframe: SCR-12 Income

The income total in [1] is the sum of the monthly source rows in [4] — salary, freelance and AdSense. The crypto row is a year-to-date net and is kept out of it (FR-55). Anything in [2] or [3] that has not been confirmed is shown but not added.

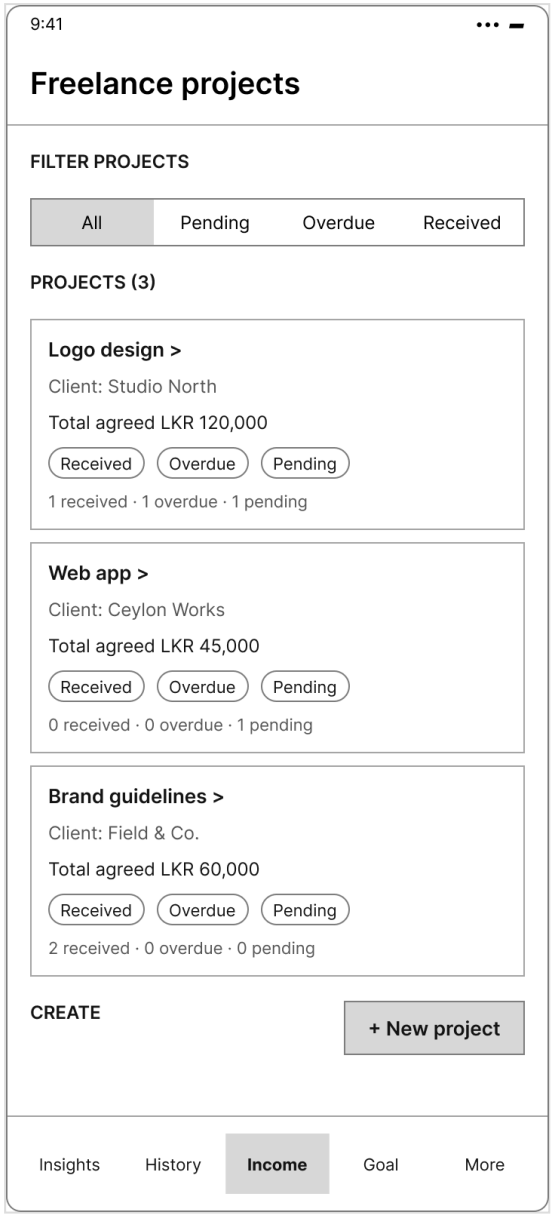

---

2. Wireframe — SCR-30 Income source edit

Figma wireframe: SCR-30 Income source edit

3. Wireframe — SCR-31 Freelance projects

Figma wireframe: SCR-31 Freelance projects

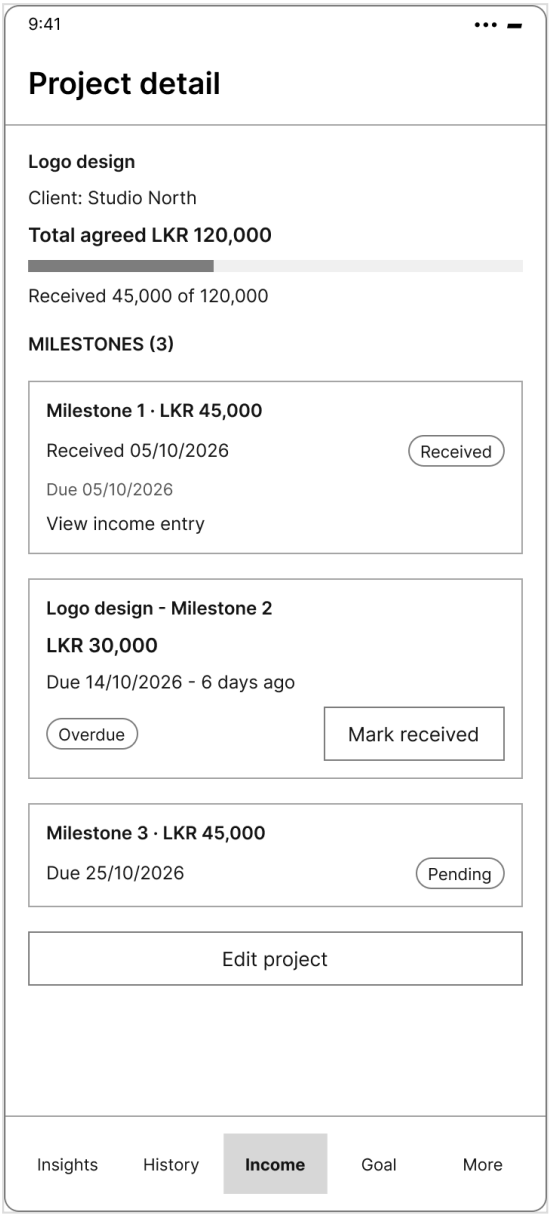

Empty state

```
+---------------------------------------------+
| < Freelance projects                        |
+---------------------------------------------+
| No projects yet. Add one to track what      |
| clients owe you.                            |
|           [ + New project ]                 |
+---------------------------------------------+
```

---

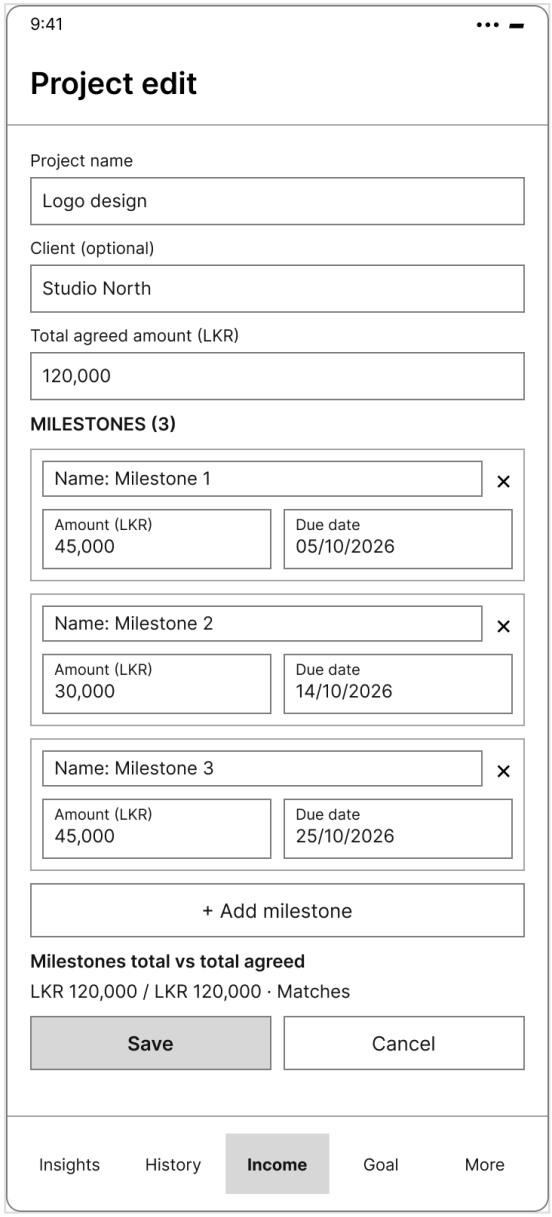

4. Wireframe — SCR-32 Project detail

Target of the overdue-milestone notification (FR-53).

Figma wireframe: SCR-32 Project detail

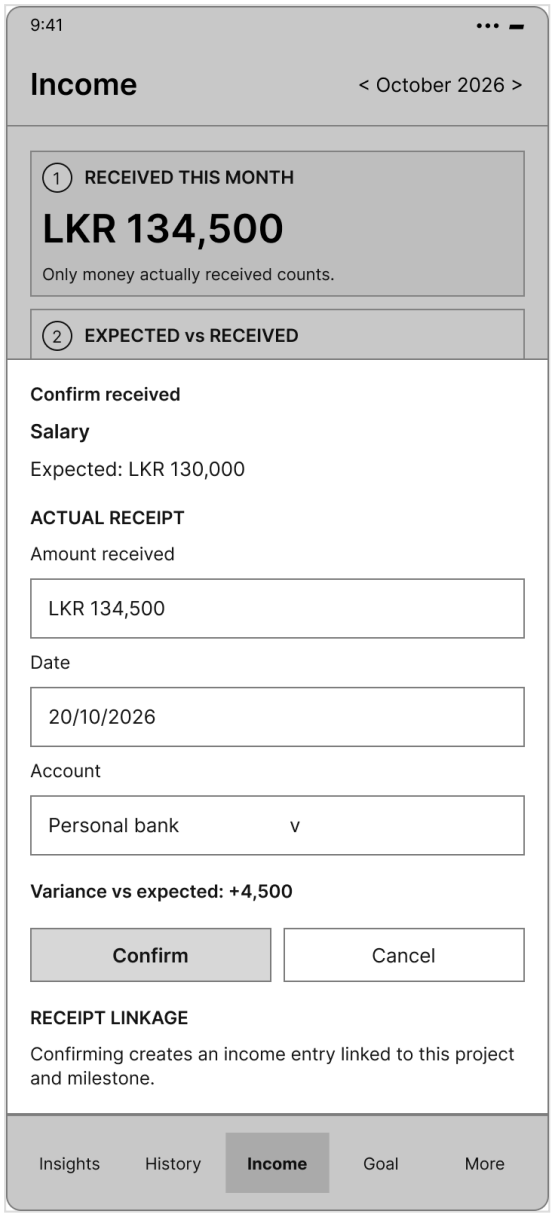

5. Wireframe — SCR-33 Project edit

Figma wireframe: SCR-33 Project edit

6. Wireframe — DLG-01 Confirm pending item

Opened from SCR-12 (salary, AdSense, milestone), SCR-32 and the Insights pending strip. Shown as a dialog over a dimmed screen.

Figma wireframe: DLG-01 Confirm pending item

Salary variant: item "Salary (25th)", Expected 130,000, Amount received prefilled and edited to 134,500, Variance **+4,500**. Confirming records 134,500 as income and keeps 130,000 as the expected amount.

---

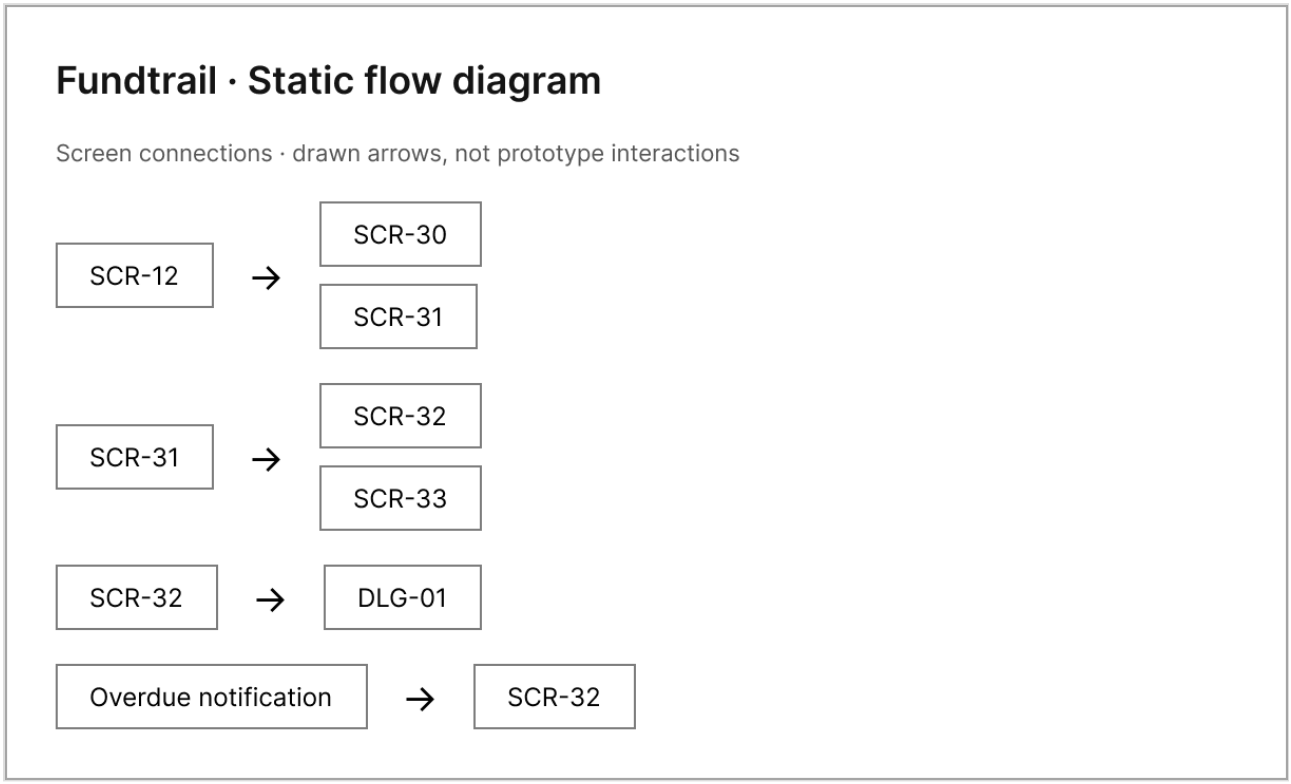

7. Wireframe — DLG-02 Income estimate

Opened from the Edit control in SCR-12 callout [1] (and from SCR-54 Settings). Shown as a dialog over a dimmed SCR-12.

```
+---------------------------------------------+
|  Your income estimate                       |
|                                             |
|  What you expect to receive each month.     |
|                                             |
|  Low    LKR [ 160,000        ]              |
|  High   LKR [ 210,000        ]              |
|                                             |
|  [1] Computed from what arrived             |
|      3-month average   LKR 150,200          |
|                                             |
|  Your estimate is shown beside the computed |
|  figure. It is never counted as income.     |
|                                             |
|       [ Save ]           [ Cancel ]         |

9. Annotations — the failure each element fixes

Callout	Wireframe element	Cause	Failure cause (from the analysis)	How the element answers it	FRs
SCR-12 [1]	Received this month, 3-month average, 6-month range	A-16	Needs four apps to compute income; estimate of LKR 160,000–210,000 never validated	Computed income sits beside the user's own estimate.	FR-57, FR-58
SCR-12 [1]	Caption "Only money actually received counts"	A-23	Impulsive with discretionary spending, optimistic about income, avoidant about expenses	Totals use received income only, in a neutral tone.	FR-56
DLG-02 [1]	Low and high estimate beside the computed 3-month average	A-16	Estimate of LKR 160,000–210,000 never validated	The user's own range is stored and shown next to the computed figure, and is not income.	FR-58, FR-115
SCR-12 [2]	Expected vs received with variance	A-12	Cannot recall the exact salary deposited; bonus varies	Expected and received are kept separate. Confirming records the actual amount and shows the variance.	FR-49, FR-56

Callout	Wireframe element	Cause	Failure cause (from the analysis)	How the element answers it	FRs
SCR-12 [3]	Waiting on payment, status chip, Mark received	A-13	Forgot to chase invoices (twice); could not match payments to projects	Pending and overdue milestones are listed with a one-tap action.	FR-51, FR-52, FR-56, FR-99
SCR-12 [4]	Income by source, AdSense estimate not counted	A-14	AdSense paid in USD at a variable rate	An `EXPECTED` AdSense entry counts as zero until confirmed.	FR-54, FR-59
SCR-12 [4]	Crypto year-to-date net	A-15	No running crypto net position; cannot state year-to-date earnings	Signed realised results show a running net, kept separate.	FR-55
SCR-30	Source type, cadence, currency, expected amount and day	A-06	Assumed a single income source	Income is several sources, each with its own cadence and currency.	FR-45
SCR-30 [1]	"Not counted until you confirm"	A-12	Cannot recall the exact salary deposited; bonus varies	An expected amount is a template, not income.	FR-49, FR-56
SCR-31	Status chip per milestone	A-13	Forgot to chase invoices (twice); could not match payments to projects	One list shows which milestones are paid, pending or overdue.	FR-50, FR-51
SCR-31	Empty state	A-03	After 13 days of diligent entry and a 3-week gap, the incomplete entries felt discouraging, so he never returned	A thin list is calm and helpful, never a failure.	FR-112
SCR-32 [2]	Overdue milestone with Mark received and weekly reminder	A-13	Forgot to chase invoices (twice); could not match payments to projects	The reminder opens the project and one tap records the payment.	FR-51, FR-52, FR-53
SCR-32	"View income entry" on a received milestone	A-13	Could not match payments to projects	Each payment is linked to exactly one project and milestone (BR-15).	FR-52
SCR-33 [1]	Milestone rows with amount and due date	A-13	Forgot to chase invoices	A due date on every milestone is what makes it overdue on its own.	FR-50, FR-51
DLG-01 [1]	Variance vs expected	A-12	Cannot recall the exact salary deposited; bonus varies	The actual is entered at confirmation and the difference is shown.	FR-49, FR-52

Lens 2 shared causes addressed: *a data model that does not fit his life* (SCR-12, 30, 31), *no insight in return for effort* (SCR-12 [1]).

---

10. Acceptance criteria (issue #124)

Criterion	Where it is met
Low-fi wireframe covering expected vs received (A-12)	SCR-12 callout 2, SCR-30 callout 1, DLG-01 variance

Criterion	Where it is met
Low-fi wireframe covering overdue (A-13)	SCR-12 callout 3, SCR-31 status chips, SCR-32 callout 2
Income sources and invoices screens	SCR-12, SCR-30, SCR-31, SCR-32, SCR-33, DLG-01, DLG-02

11. Arithmetic used

Figure	Value	Rule
Salary variance	134,500 − 130,000 = +4,500	BR-16
Income this month	134,500 + 0 + 0 = 134,500 (expected AdSense 18,000 excluded)	FR-56, FR-59
Project received	30,000 of 90,000 (one milestone)	BR-15
Milestones total	30,000 × 3 = 90,000 = total agreed	FR-50
Overdue milestone	due 01/10/2026, today 07/10/2026, 6 days ago	BR-15
Web app Milestone 2	due 12/10/2026, today 07/10/2026, in 5 days; Milestone 1 is received (SCR-31 chip order is milestone order)	BR-15
Web app milestones (placeholder)	30,000 + 45,000 + 45,000 = 120,000 total agreed	FR-50
Freelance 0 this month	Every received milestone on SCR-31 (Logo design 1 on 22/09/2026, Web app 1, both Brand guide milestones) landed before October, so October freelance income is 0	FR-56, FR-59

12. Open points

Point	Detail	Owner action
Whole-rupee display	NFR-20 and BR-02 specify two decimals (`LKR 1,000.50`). The frames show whole rupees.	`TODO(M3)`: settle with S1–S3, S5 and S6 in `failure-causes.md` §4. M4 inherits the choice.
Web app amounts	The scenario gives only the 120,000 total. The milestone amounts are placeholders chosen to add up to it.	`TODO(M3)`: replace if the scenario figures are defined.
