S6 — Insights trends, categories and recurring costs wireframe

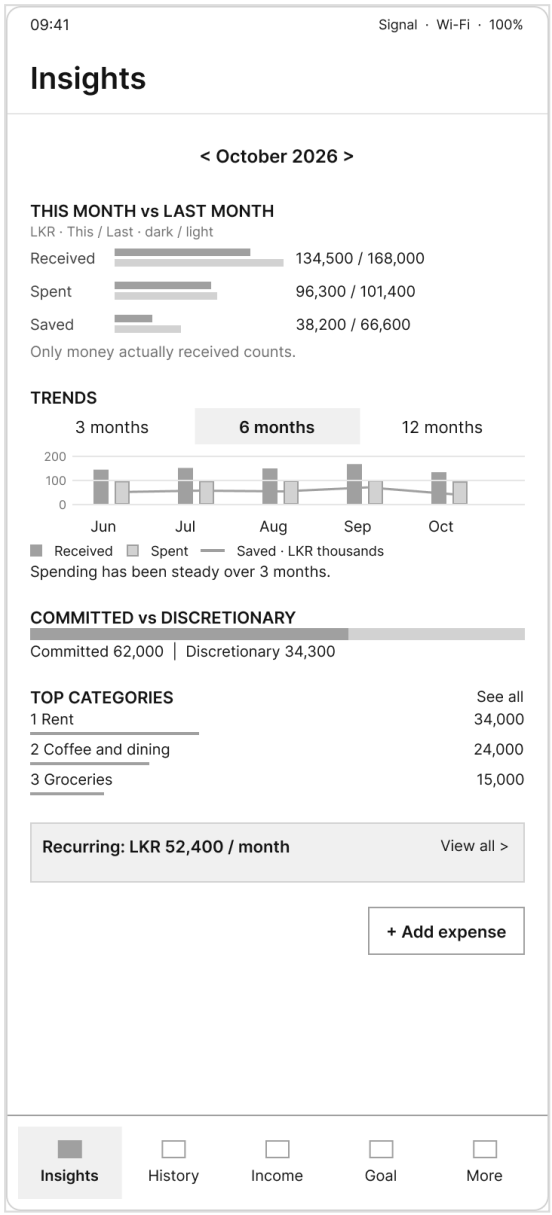

Document	`Docs/wireframes/S6-insights-recurring.md`
Issue	EPIC-011 / T4 · Secondary wireframes for M3 screens (#124)
Screens	SCR-10 Insights (trends and category detail), SCR-50 Recurring costs, SCR-51 Recurring edit, DLG-06 Subscription review (`Docs/ux/screens.md`)
Fidelity	Low: boxes and labels only. Visual polish is M4.
Failure causes from	`Docs/Scenario analysis.md` (rows `A-xx`)
Index	`Docs/wireframes/failure-causes.md`
Builds on	S1-dashboard.md, which holds the main SCR-10 wireframe

Job of the screens. Show how the months compare and where the money goes, and put every recurring cost in one visible list. Income is irregular, so the comparison is *this month vs last month*, with a short trend, not a budget bar (A-07). Spending is split into committed and discretionary so the pattern is clear (A-18). Recurring costs, including subscriptions, are listed with one monthly total (A-17).

Legend: `[n]` is a callout that matches the annotation table below. Figures are the scenario figures and appear only in documentation (CON-15). Dates are DD/MM/YYYY (NFR-20). Amounts are drawn as whole rupees to keep the frames readable; the app formats them as `LKR 1,000.50` (NFR-20, BR-02), see §11. Today is 07/10/2026. Status is a neutral outlined chip, never a red alarm (NFR-14).

1. Wireframe — SCR-10 Insights with trends

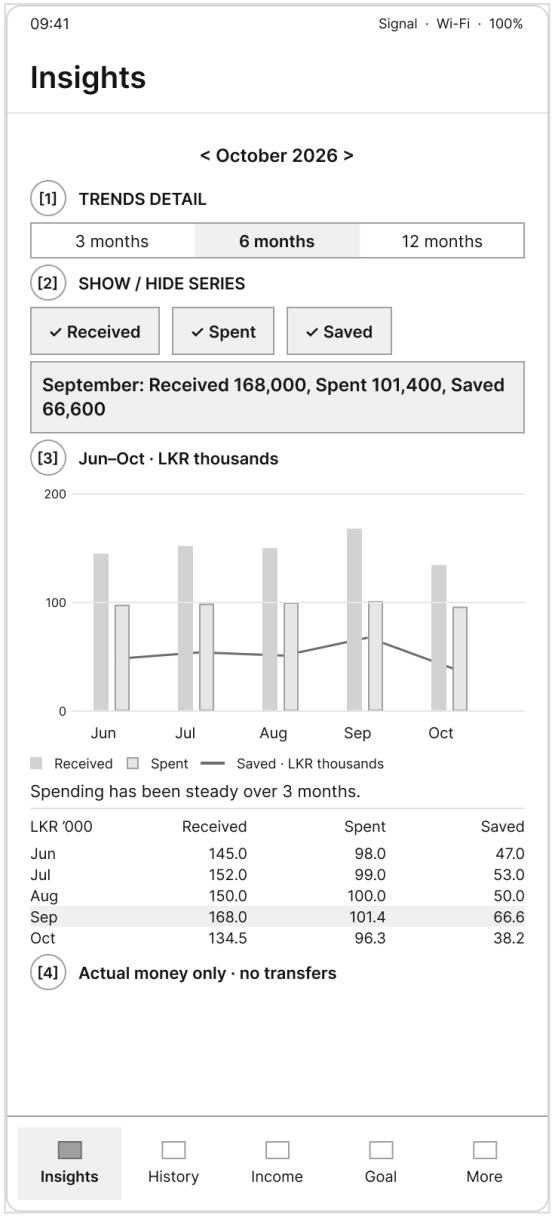

Callouts 1, 3, 4 and 5 are the same cards as S1. Only the trends card [2] is new. It needs axes, ranges and a touch marker, so it is drawn with Vico (ADR-0006) rather than plain Compose; see §11.

Figma wireframe: SCR-10 Insights with trends

Trends detail

Tapping a month on the chart shows its figures and keeps the rest of the screen unchanged.

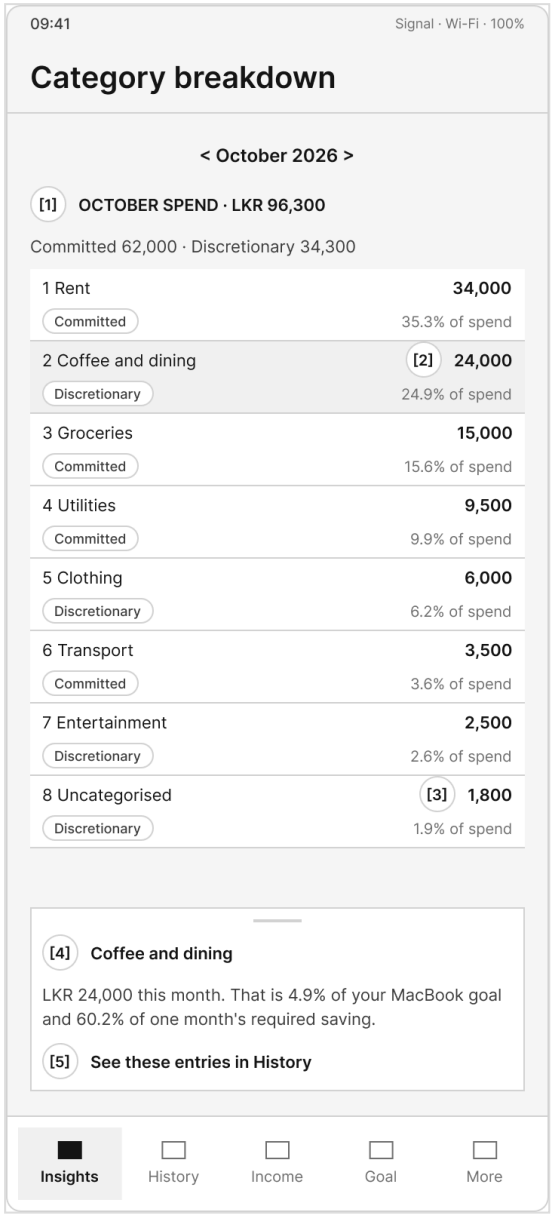

Figma wireframe: SCR-10 trends detail

Months with no entries are drawn as a thin empty slot, with no warning or "incomplete" label (FR-97, FR-106).

---

2. Wireframe — Category breakdown

Opened from "See all" in callout [4]. The list is for the selected month.

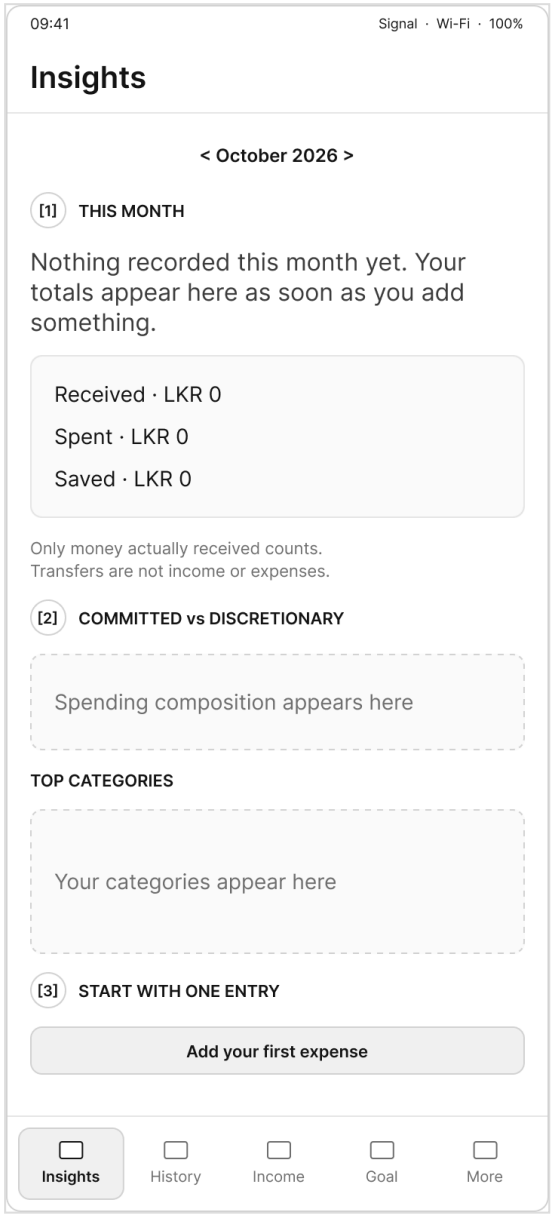

Figma wireframe: Category breakdown

Tapping a row opens a bottom sheet (Coffee and dining shown):

```
+=============================================+
|  Coffee and dining                          |
|  LKR 24,000 this month                      |
|  [2] That is 4.9% of your MacBook goal and  |
|      60.2% of one month's required saving.  |
|                                             |
|  [ See these entries in History ]           |
+---------------------------------------------+
```

3. Wireframe — SCR-10 Insights, empty state

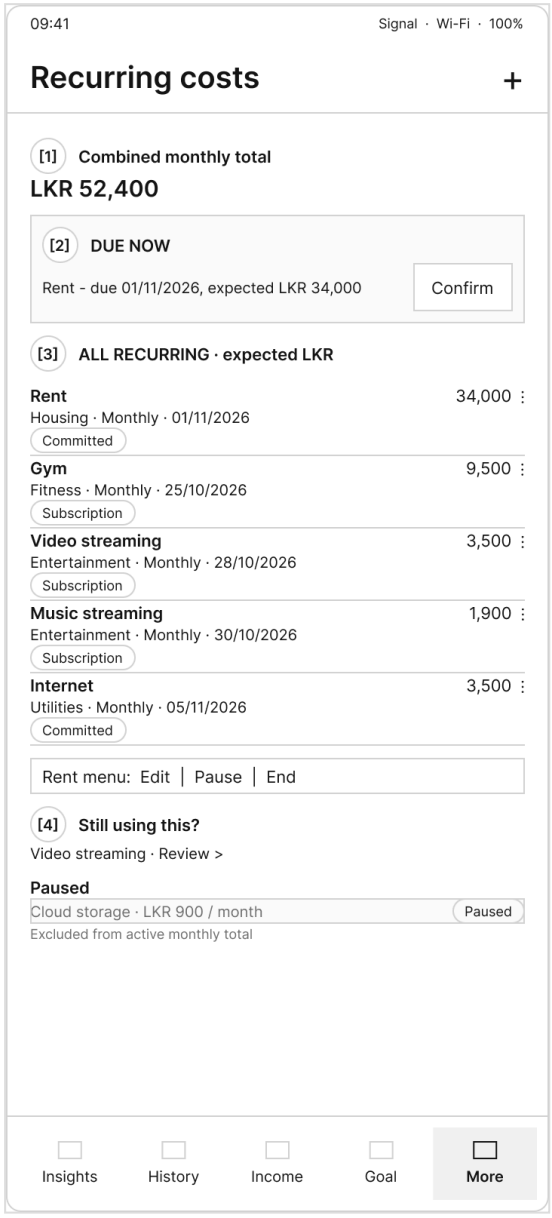

The full empty state is in S1 section 2. With a single entry the cards show that one figure and no warning.

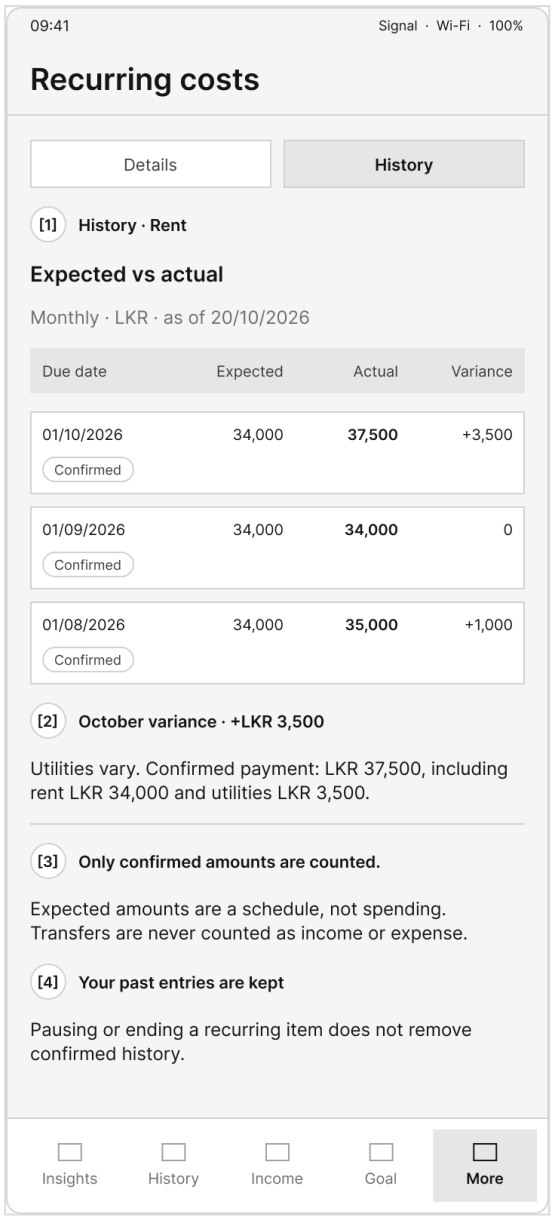

Figma wireframe: SCR-10 Insights, empty state

4. Wireframe — SCR-50 Recurring costs

Reached from More, from "View all" in callout [5] and from the Insights pending strip.

Figma wireframe: SCR-50 Recurring costs

Figma wireframe: SCR-50 History tab, expected vs actual

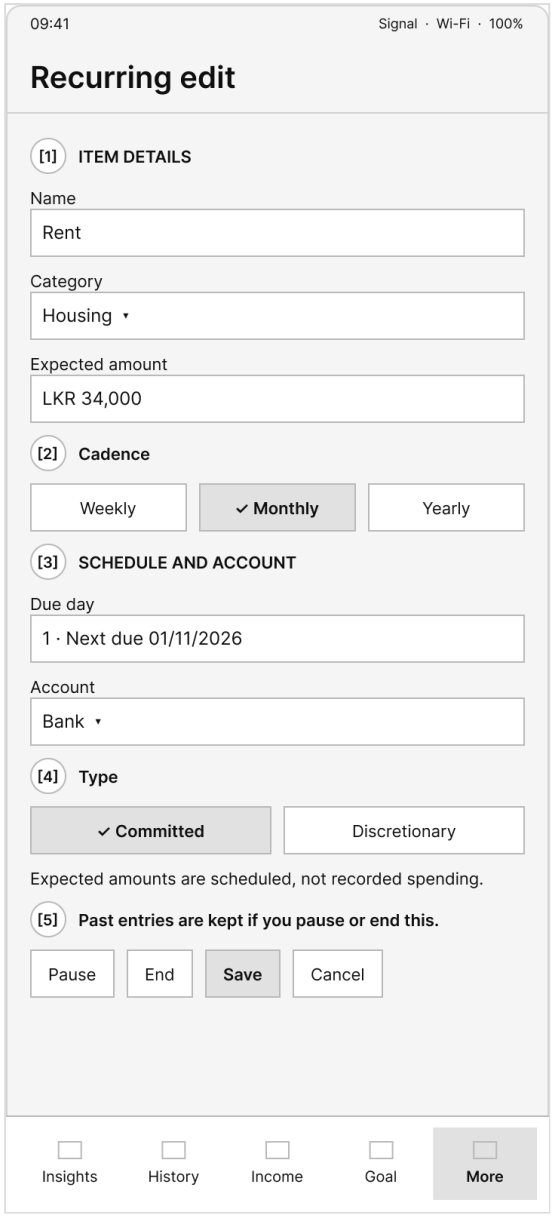

The monthly total in [1] is the sum of active templates only. The paused row is excluded.

Empty state

```
+---------------------------------------------+
| < Recurring costs                   ( + )   |
+---------------------------------------------+
| Nothing recurring yet. Add rent, a gym or a  |
| subscription to see your fixed costs in one  |
| place.                                       |
|            [ Add a recurring cost ]          |
+---------------------------------------------+
```

---

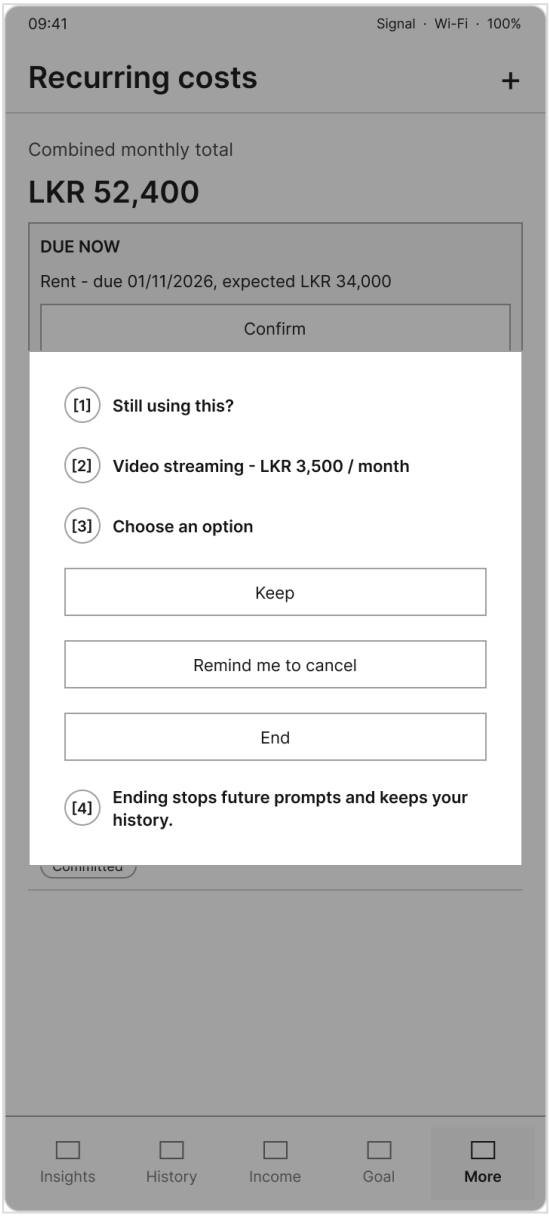

5. Wireframe — SCR-51 Recurring edit

Figma wireframe: SCR-51 Recurring edit

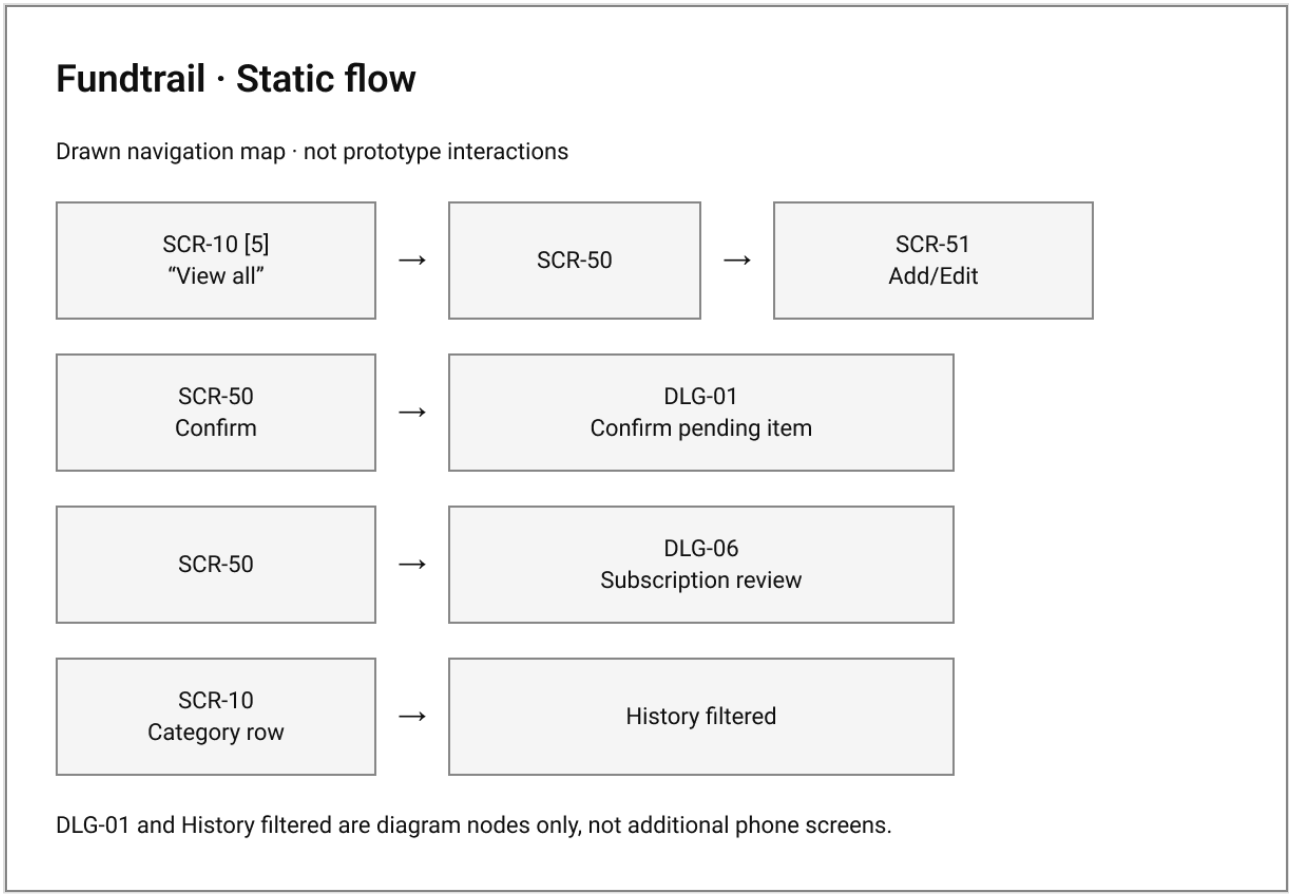

6. Wireframe — DLG-06 Subscription review

Shown every 90 days by default (FR-69). A dialog over a dimmed SCR-50.

Figma wireframe: DLG-06 Subscription review

7. Flow

Figma diagram: static flow

8. Annotations — the failure each element fixes

Callout	Wireframe element	Cause	Failure cause (from the analysis)	How the element answers it	FRs
SCR-10 [1]	This month vs last month, no limit line	A-07	Assumed a fixed monthly budget	Irregular income makes the month-on-month comparison the useful one.	FR-91, FR-98
SCR-10 [2]	Trends: received, spent, saved over 3, 6 or 12 months	A-09	Data went in, but no insight came out	The chart gives a return for the effort of entering data.	No FR covers the trend chart itself yet (§11); the card sits beside FR-91 and FR-98
SCR-10 [2]	Empty slot with no warning for a quiet month	A-03	After 13 days of diligent entry and a 3-week gap, the incomplete entries felt discouraging, so he never returned	A gap in the chart is not shown as a failure.	FR-97, FR-106

Callout	Wireframe element	Cause	Failure cause (from the analysis)	How the element answers it	FRs
SCR-10 [3]	Committed vs discretionary split	A-18	No category system; no idea of discretionary vs committed	The split makes the pattern visible without effort.	FR-93
SCR-10 [4] / Category breakdown [1]	Ranked categories with type chips and share	A-18	Shocked by LKR 24,000 on coffee and dining	The biggest categories are ranked and labelled, and transfers are absent.	FR-94, BR-13
Category breakdown [2]	Goal cost of a spend	A-18, A-19	Shocked by LKR 24,000 on coffee and dining; goal invisible	The amount is shown against the goal in plain, neutral words (BR-12).	FR-94, FR-76
SCR-10 [5]	Recurring summary, View all	A-17	Fragmented spending; gym auto-debit; two subscriptions meant to be cancelled	One visible number links to the full list.	FR-95
SCR-50 [1]	Combined monthly total	A-17	Fragmented spending	The total equals the sum of active templates, normalised to monthly.	FR-68
SCR-50 [2]	Due now with one-tap Confirm	A-22	Utilities make the effective monthly rent variable	A due item is confirmed with its actual amount; unconfirmed items are not counted.	FR-66
SCR-50 [3]	All recurring list, subscription chips, pause or end	A-17	Gym auto-debit; two subscriptions meant to be cancelled	Every fixed cost is visible and can be paused or ended without losing history.	FR-65, FR-68, FR-70
SCR-50 History	Expected, actual and variance	A-22	Utilities make the effective monthly rent variable	September rent shows 34,000 expected against 37,500 actual, the same pattern as salary.	FR-67
SCR-51 [1]	Actual entered at confirmation	A-22	Utilities make the effective monthly rent variable	The template holds the expected amount only.	FR-65, FR-66
DLG-06	"Still using this?" keep, remind, end	A-17	Two subscriptions meant to be cancelled	A gentle review every 90 days, with no pressure.	FR-69
Whole set	Calm wording, no red, no streaks	A-20	Every tool was too unpleasant to open daily	The screens invite a look rather than avoidance.	FR-106, NFR-14

Lens 2 shared causes addressed: *no insight in return for effort* (SCR-10 [2], [3], [4]), *a data model that does not fit his life* (SCR-50, SCR-51), *no tolerance for lapses* (empty states).

---

9. Acceptance criteria (issue #124)

Criterion	Where it is met
Low-fi wireframe covering trends	SCR-10 callout 2 and the trends detail
Low-fi wireframe covering the recurring costs list (A-17)	SCR-10 callout 5, SCR-50 list and total, SCR-51, DLG-06
Insights category view (A-18)	SCR-10 callouts 3 and 4, the category breakdown and the goal-cost sheet

10. Arithmetic used

Figure	Value	Rule
Saved this month	134,500 − 96,300 = 38,200	BR-05
Saved in September	168,000 − 101,400 = 66,600	BR-05
Committed + discretionary	62,000 + 34,300 = 96,300 = spent	BR-13
Recurring total	34,000 + 9,500 + 3,500 + 1,900 + 3,500 = 52,400	FR-68
Goal cost of 24,000	24,000 ÷ 490,000 = 4.9%, and 24,000 ÷ 39,900 = 60.2%	BR-12
Rent variance (September)	37,500 − 34,000 = +3,500	BR-16
Rent in October	confirmed at 34,000, so the category row and the 96,300 total stand	BR-16, FR-66
Due now	Internet is due 05/10/2026, two days before today (07/10/2026); unconfirmed, so not counted	FR-66

11. Open points

Point	Detail	Owner action
Trends card: requirement	The SRS lists the month summary, the committed split, the categories and month switching (FR-91 to FR-98) but has no requirement for a multi-month trend chart.	`TODO(M3)` : confirm the trends card with the team and add an FR if it stays.
Trends card: chart approach	Settled. The card has a value axis, a month axis, 3/6/12-month ranges, three toggleable series and a touch marker, the case ADR-0005 reserved under *When to revisit*.	ADR-0006 is Accepted (2026-10-21): Vico for this card, plain Compose for simple shapes. `TODO(M3)` : pin the version in the version catalog when the card is built.
Whole-rupee display	NFR-20 and BR-02 specify two decimals (`LKR 1,000.50`). The frames show whole rupees.	`TODO(M3)` : settle in `failure-causes.md` §4. M4 inherits the choice.
Category list share and amounts	The Ride-hailing and Other rows are placeholders. Only Rent, Coffee and dining and Groceries are scenario figures, and they sum to 73,000 of the 96,300 spent.	`TODO(M3)` : replace with real category names when the category list is fixed.

Point	Detail	Owner action
Trends chart, August column	The chart draws Aug, Sep and Oct. September (168,000 received, 101,400 spent) and October are scenario figures; the August column is drawn to scale but its figures are a placeholder.	`TODO(M3)`: replace if the scenario figures are defined.
Gym, streaming and internet amounts	The scenario gives only rent (34,000) and the 52,400 total. The other amounts are placeholders chosen to add up to that total.	`TODO(M3)`: replace if the scenario figures are defined.
