S3 — Goal detail wireframe

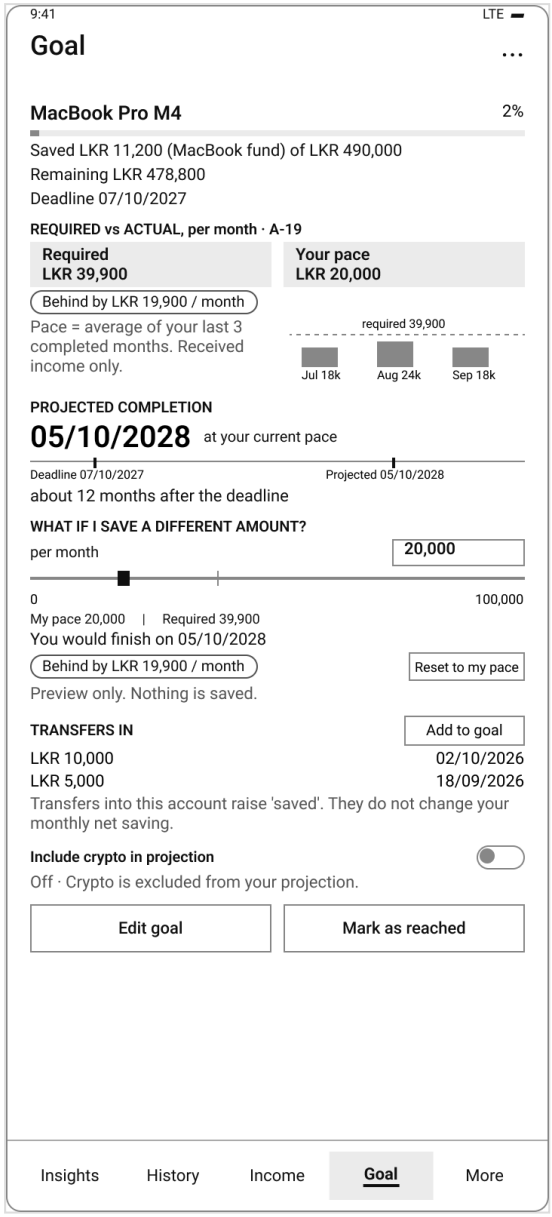

Document	`Docs/wireframes/S3-goal-detail.md`
Issue	EPIC-002 / T2 · S3 (#14) · Parent: #11
Screen	SCR-13 Goal (`Docs/ux/screens.md`)
Fidelity	Low: boxes and labels only. Visual polish is M4.
Failure causes from	`Docs/Scenario analysis.md` (rows `A-xx`)
Index	`Docs/wireframes/failure-causes.md`

Job of the screen. Show whether the MacBook goal is reachable, with no judgement. It uses the scenario arithmetic: (490,000 − 11,200) ÷ 12 = LKR 39,900 per month.

Legend: `[n]` is a callout that matches the annotation table below. Dates are DD/MM/YYYY (NFR-20). Status is a neutral chip, never a red alarm (NFR-14, NFR-16).

---

1. Wireframe — Frame 1: default state

Figma wireframe: Frame 1, default state

2. Wireframe — Frame 2: what-if moved

Only the what-if card and the timeline change. The date moves with the control.

Figma wireframe: Frame 2, what-if moved

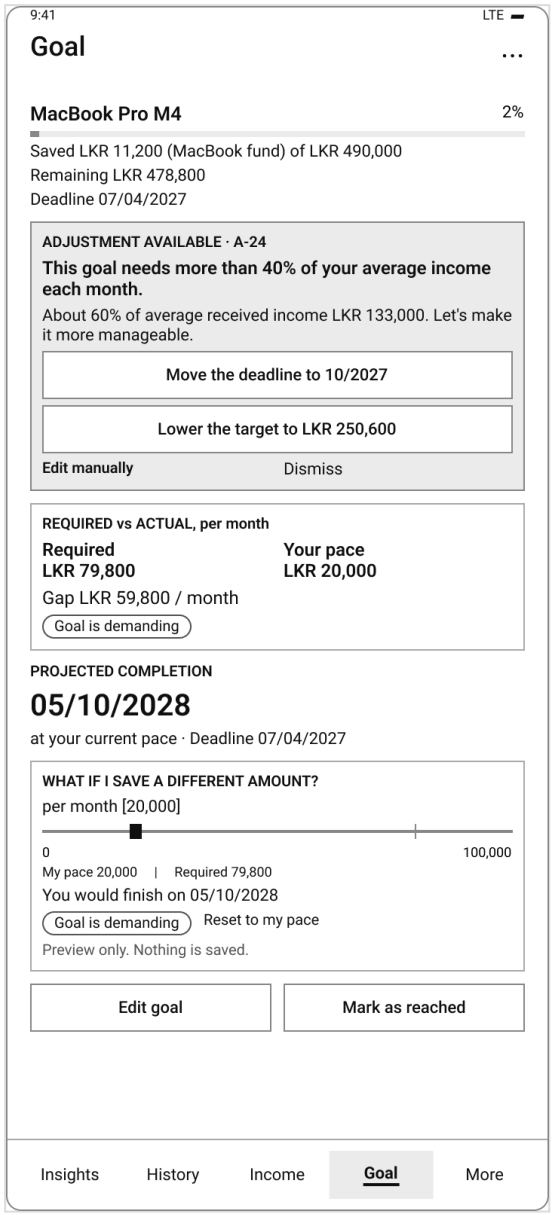

What-if values

Today is 07/10/2026. Months = remaining ÷ monthly amount (BR-06, BR-09).

Monthly saving	Months to finish	Finish date	Status against 07/10/2027
20,000 (pace)	23.9	05/10/2028	Behind by 19,900 per month
30,000	16.0	05/02/2028	Behind by 9,900 per month
39,900 (required)	12.0	07/10/2027	On track
50,000	9.6	25/07/2027	Ahead

3. Wireframe — Frame 3: infeasible goal (variant, neutral)

Shown only when required saving is above 40% of average received income (BR-10). The scenario goal is about 30%, so this banner **does not** appear by default.

Figma wireframe: Frame 3, infeasible goal

While this banner is up the chip reads *needs adjusting*, not *behind* (BR-09). *Dismiss* returns it to the normal status. Choosing an option opens the goal edit form pre-filled (SCR-40). Offers: new deadline = remaining ÷ (30% × average income) months from today; reduced target = saved + 30% × average income × months (BR-11).

4. Wireframe — Frame 4: no goal, and no projection

Figma wireframe: Frame 4, no goal yet

---

5. Annotations — the failure each element fixes

Callout	Wireframe element	Cause	Failure cause (from the analysis)	How the element answers it	FRs
1	Goal header: target, saved, deadline, remaining	A-19	Goal is emotionally present and financially invisible; does not know his savings rate	The goal is a visible entity with a progress bar. "Saved" is the balance of the goal's linked savings account, and the account name (here "MacBook fund") is shown beside it so the source is clear (BR-07).	FR-75

Callout	Wireframe element	Cause	Failure cause (from the analysis)	How the element answers it	FRs
2	Required per month vs your pace, with status and gap	A-19	Goal is emotionally present and financially invisible; does not know his savings rate	Required saving, actual saving and status sit side by side.	FR-76, FR-77, FR-78
2	Figures are computed, never typed in	A-01	Hand-built formulas broke after row insertions	The user never maintains formulas. The app computes every figure.	FR-76
2	Pace uses received income only	A-23	Impulsive with discretionary spending, optimistic about income, avoidant about expenses	Projections use received income only; status is a neutral chip.	FR-77, FR-78
3	Projected completion date against the deadline	A-19	Goal is emotionally present and financially invisible; does not know his savings rate	The date at the current pace is shown against the deadline.	FR-79
4	What-if slider: change the monthly amount, watch the date move	A-19	Goal is emotionally present and financially invisible; does not know his savings rate	Lets him see what a different monthly amount does before committing. A preview only; nothing is saved.	FR-85
5	"Add to goal": transfer into the linked savings account, with recent transfers listed	A-19	Goal is emotionally present and financially invisible; does not know his savings rate	Money set aside for the goal moves into its savings account, so progress is that account's balance and a withdrawal lowers it. Net saving is unchanged.	FR-80, FR-60
6	"Include crypto in projection" switch, default off	A-23	Impulsive with discretionary spending, optimistic about income, avoidant about expenses	Keeps the projection conservative; crypto can be a loss.	FR-83
6	Same switch	A-15	No running crypto net position; cannot state year-to-date earnings	Crypto stays a separate, signed, realised figure.	FR-55, FR-83
Frame 3	Neutral banner with deadline and target offers	A-24	The required saving may exceed what he can realistically save	Detects an infeasible goal, shows the gap, and offers a new deadline or target instead of a permanent "behind" status.	FR-81
Frame 4	"No goal yet" and "No projection yet" states	A-03	After 13 days of diligent entry and a 3-week gap, the incomplete entries felt discouraging, so he never returned	A thin screen is helpful, not a failure.	FR-79, FR-112
Whole screen	Calm layout, no alarm colour	A-20	Every tool was too unpleasant to open daily	The screen invites a look rather than avoidance.	FR-106, NFR-14

Lens 2 shared cause addressed: *no connection to the goal* (callouts 1–5).

6. Acceptance criteria (issue #14)

Criterion	Where it is met
Shows required vs actual monthly savings rate	Callout 2: Required LKR 39,900 beside Your pace LKR 20,000, plus the 3-month chart
Shows the projected completion date	Callout 3: 05/10/2028 against the 07/10/2027 deadline
Includes a what-if control	Callout 4: slider, typed field and quick-pick chips, with Frame 2 showing the date moving
Uses the 490,000 / 11,200 / ~39,900 arithmetic	Callout 1 and 2, with the table in section 2
